4th INTERNATIONAL CONFERENCE ON COMPUTING SYSTEMS AND INTELLIGENT APPLICATIONS (ComSIA 2027)

Call for Special Sessions

Special Session: AI-Enabled Intelligent Systems and Machine Learning Innovations for Smart and Sustainable Future

Session Chair: Dr. Urmila Pilania
Designation: Associate Professor,
Affiliation: Department of Computer Science and Technology,
E-mail: urmilapilania@gmail.com
Mobile: 9911306200

Session Chair: Dr. Manoj Kumar
Designation: Associate Professor,
Affiliation: Department of Computer Science and Technology,
E-mail: manojattri003@gmail.com
Mobile: 8368906788

Artificial Intelligence (AI) and Machine Learning (ML) are playing a significant role in creating intelligent systems that are capable of overwhelming various social, industrial, and environmental challenges. With the emergence of data-driven technologies, Artificial Intelligence-based solutions are being implemented in various areas such as healthcare, smart cities, transportation, cybersecurity, agriculture, and environmental and many more. Advanced intelligent data analytics, combined with various advanced computational models, are playing a significant role in increasing the efficiency and automation of various intelligent systems. Such solutions are also important in achieving various sustainable development goals by optimizing resources, improving infrastructures, and increasing the quality of life.

The objective of this special session is to provide an opportunity to researchers and practitioners to discuss recent developments on Artificial Intelligence (AI) and Machine Learning (ML) technologies to build intelligent and sustainable systems. It is focused on new AI-based technologies to enable smart technologies, intelligent decisions, and efficient use of resources. It is also focused on interdisciplinary research to solve problems in various domains such as smart cities, healthcare, IoT, and environmental sustainability. It is also focused on creating an opportunity to enable researchers and practitioners to collaborate with each other to develop intelligent computing technologies but not limited to:

- Machine Learning Algorithms and Optimization
- Deep Learning and Neural Networks
- Explainable Artificial Intelligence (XAI)
- AI for Smart Cities and Intelligent Infrastructure
- AI in Healthcare and Biomedical Applications
- Natural Language Processing and Conversational AI

- Computer Vision and Image Analysis
- AI/ML for Cybersecurity and Privacy
- AI and Machine Learning for Internet of Things (IoT)
- Reinforcement Learning and Autonomous Systems
- AI for Environmental Challenges and Sustainability
- Intelligent Decision Support Systems
- Edge AI and Distributed Machine Learning
- AI in Industry 4.0 and Smart Manufacturing
- Ethical and Responsible AI
